Subject index

Ab-initio CI calculations 19
Acetylene 1
Additive separability 149
Algebraic diagrammatic construction 441
Amides 1
Anharmonic oscillators 289
Anomalies 149
Atomic helium 307
Atomic nuclei 95

Bargmann Hilbert space 149
Bargmann space 81, 289

Calculation of staggered magnetization and correlation functions 181
Carbonyl compounds 1
CC-based direct methods 441
CCSD(T) 215
Chemical reaction 51
Comparison with matrix isolation 19
Comformational analysis 51
Convergence 81
Correlation problem 91
Coupled-cluster 335
Coupled-cluster approach 223, 307
Coupled-cluster equations 387
Coupled-cluster method 483
Coupled-cluster Method 81
Coupled-cluster method 181, 257, 427, 469
Coupled-cluster (CC) theory 349
Coupled-cluster theory 95, 149, 289
Coupled-pair functional (CPF) 349

Electron gas 95
Electronic correlation 257
Electronic spectra calculations 483
Electronic transition energies 427, 469
Electroweak radiative corrections 257
Ethylene 1
Exchange operator 63
Excited state geometries and vibrational frequencies 1
Extended coupled-cluster method 149, 289
Extended coupled-cluster method (ECCM) 95

Field theory 149
Fock-space formalism 483
Frequency-dependent polarizabilities 307
f-type polarization functions 215

GaAs ground state 215
Graph theory 29
Grassmann algebra 149
Ground states and excited states 181

Hartree−Fock 407
High-*Z* atoms 207
Hilbert space ansatz 335
History of coupled-cluster theory 91
H_4 model system 321, 335
Holomorphic representation 289
Holormorphic wave function 149

Incomplete model spaces 427, 469
Intruder states 223, 427, 483

Lamb shift 207
Lithiumlike uranium 207
Logical structure of chemistry 29
Low-dimensional anisotropic quantum antiferromagnets 181

Many-body perturbation theory 307, 407
Many-electron correlation problem 223
Mathematical model 29, 51
Matrix products 387

Method of moments approach 223
MNDOC-CI 1
Model field theories 289
Molecular ion 245
MRCCSD-DZP 335

Normal coupled-cluster method 289
Normal coupled-cluster method (NCCM) 95
Nuclear matter 95
Numerical calculation 245

Open-shell systems 407
Oscillator strength 245

Parity nonconservation 257
$Pd-H_2$ complex 19
Perturbation theory 81
Phase space 149
Phase transitions 181
Positron annihilation 95
Potential energy hypersurface 29, 51
Potential energy surface 19
Potential surfaces 407
PPP model 483

QED effects 207
Quadratic CI (QCI) 349
Quantum field theory 95
Quantum hydrodynamics 95
Quantum many-body techniques 95
Quantum spin lattice models 181
Quantum theory of atoms and molecules 91
Quasi-degeneracy 223
Quasidegenerate problems 321

Regularization 289
Relativistic many-body effects 257
Representation 63

Self energy 207
Separability 441
Single-reference coupled-cluster 321

Transferability 63

Variational CC-Unitary CC 349
Vectorized program 387

XXZ-model Hamiltonian 181
